GENAI BASICS • LESSON 09 • MODULE 3: AI ASSISTANTS AT WORK

# Claude Ecosystem and Artifacts

## From a chat answer to something people can use

Where Claude lives, what an artifact is, how to ask for one so the result can be checked, and what is safe to share. As of October 2026.

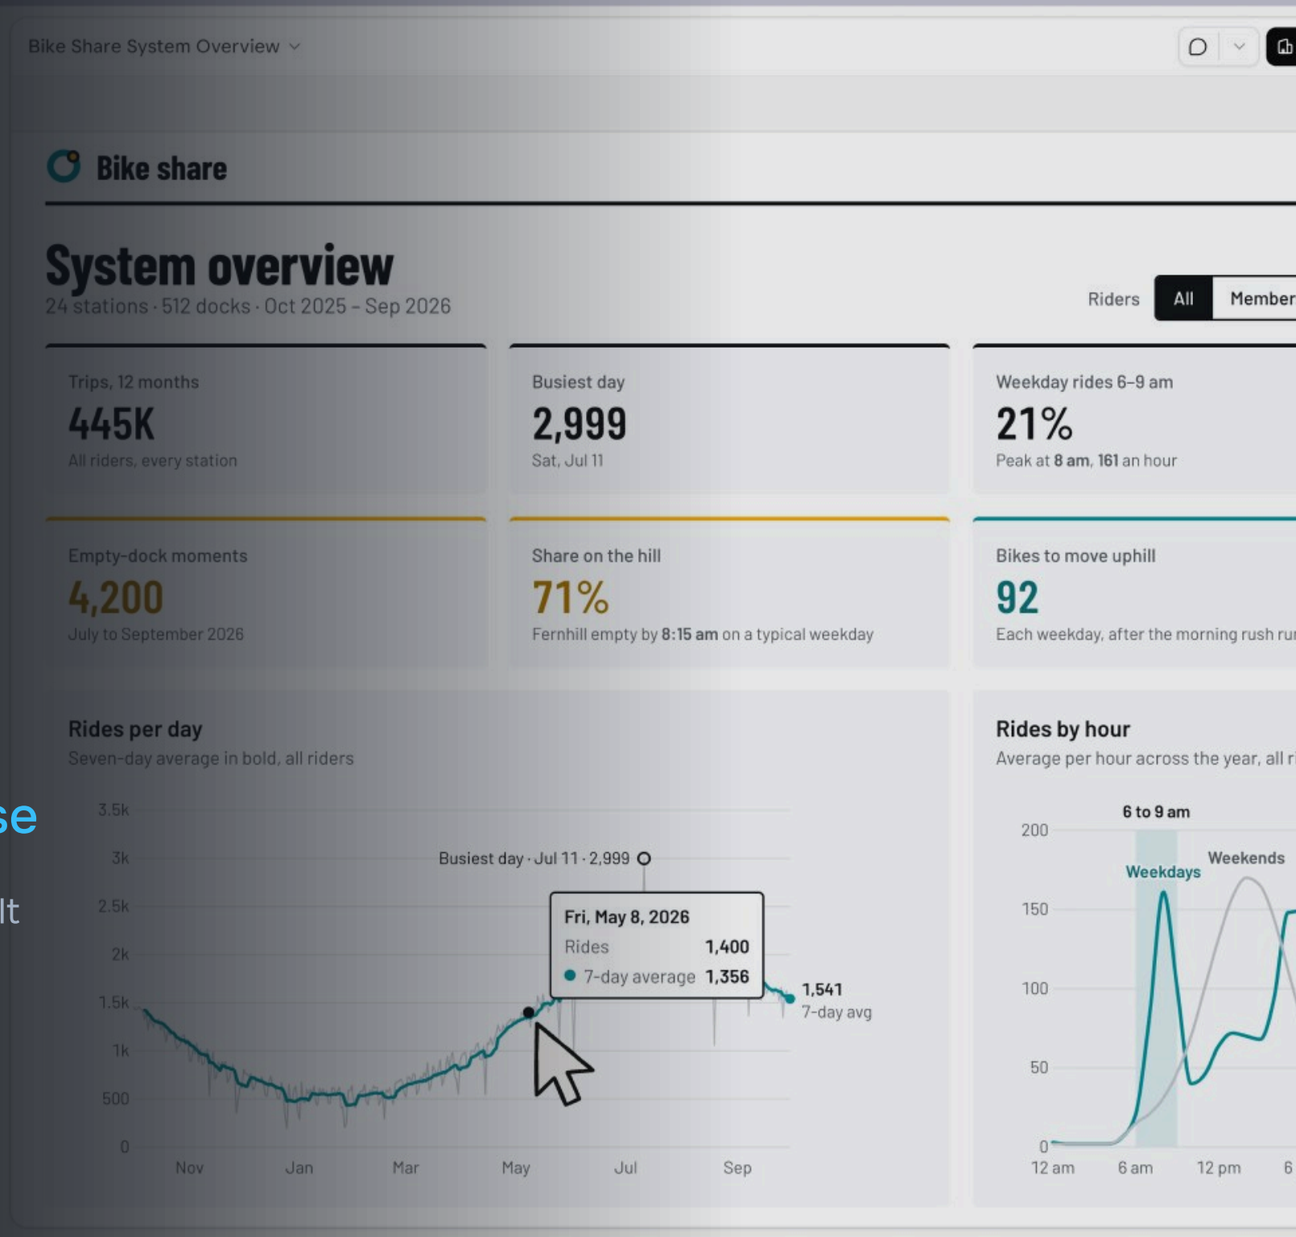

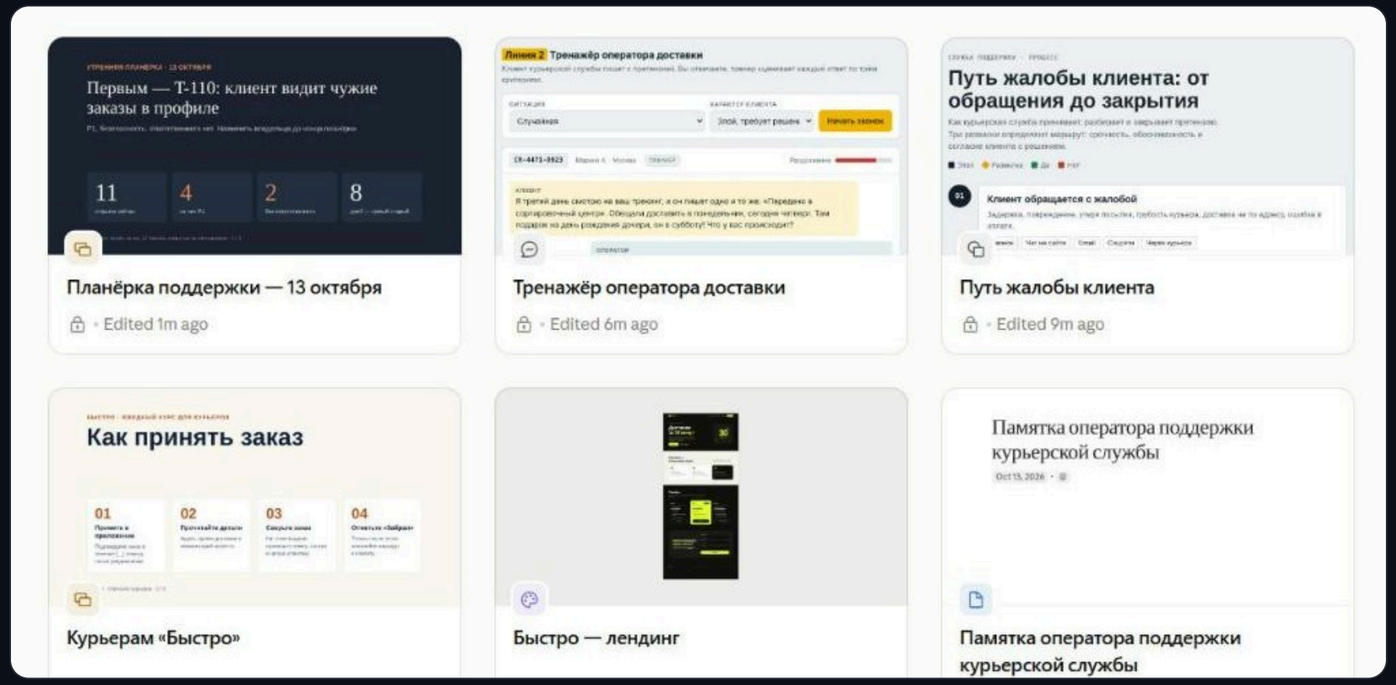

Image: Anthropic (claude.com)

WHY THIS LESSON

# Six working things — one sentence each

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

“Make a 5-slide deck for new couriers…”

This is the **Artifacts** tab after 10 minutes of preparing this lesson. Each tile is a separate thing: open it, edit it, download it, show it to a colleague.

- Slides
- Coach app
- Diagram
- Document
- Landing page
- Dashboard

LESSON VOCABULARY

# Six words you will need today

## Artifact

a finished thing next to the chat: doc, slides, dashboard

## Project

a folder: files + rules for one topic

## Memory

what Claude remembers about you across chats

## Connector

access to your service: Drive, Gmail, GitHub

## Skill

a ready recipe: “how to build a report”

## Agent

takes many steps towards a goal by itself

You saw similar things in L07: Copilot also has agents, connectors and memory. **Different names — same ideas.**

MAP

# Where Claude lives

One model — many places to work with it

### TALK

**Claude chat**
web, PC, phone

**Projects**
files + topic rules

### MAKE THINGS

**Artifacts**
doc, slides...

**Claude in Office**
Excel, Word, PowerPoint

### ACT FOR YOU

**Long tasks**
many steps by itself

**Claude in Chrome**
clicks in the browser

### FOR DEVELOPERS

**Claude Code**
writes code

**API**
in your program

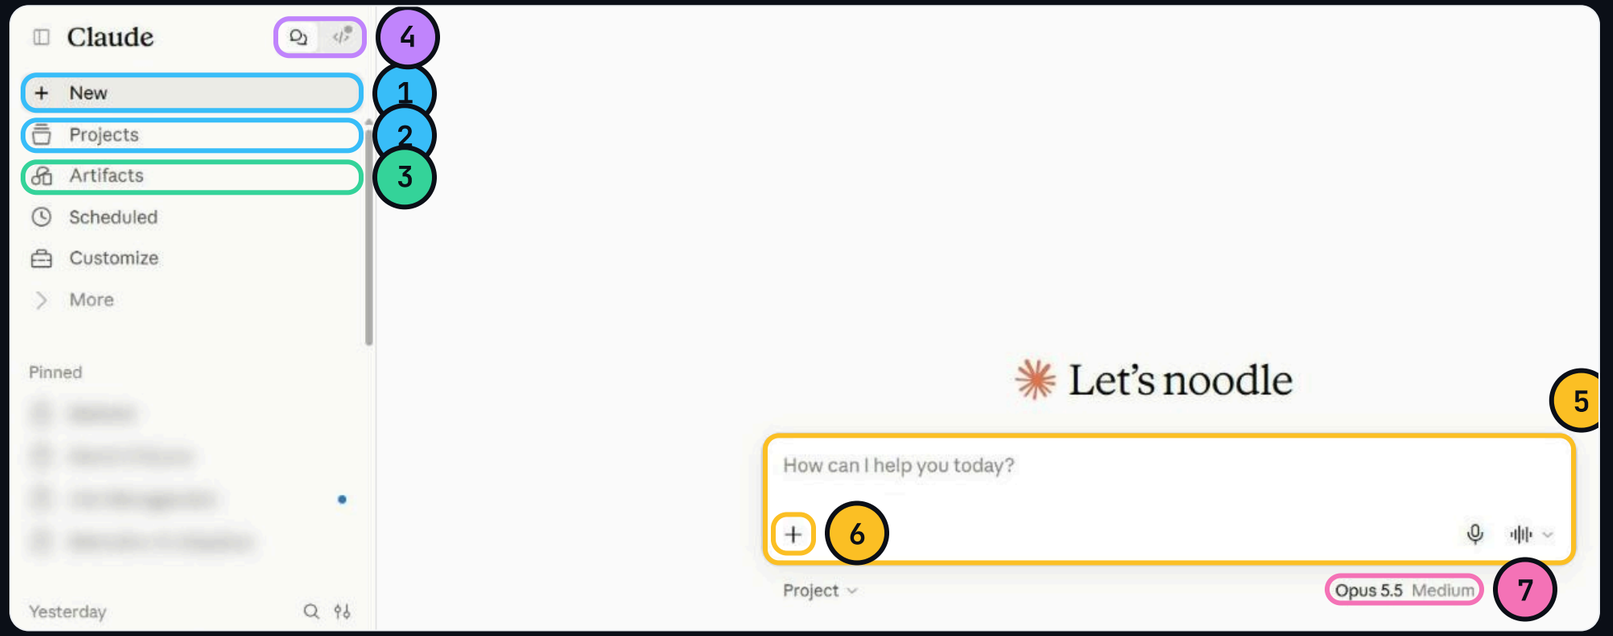

**The same Claude models**
Fable · Opus · Sonnet · Haiku — pick in the model menu

**Connectors and skills**
plug into any of these places

> Today is mostly the **green column**: artifacts. Agents (long tasks, Code) come in lessons 11 and 16.

INTERFACE

# The main window: what is where

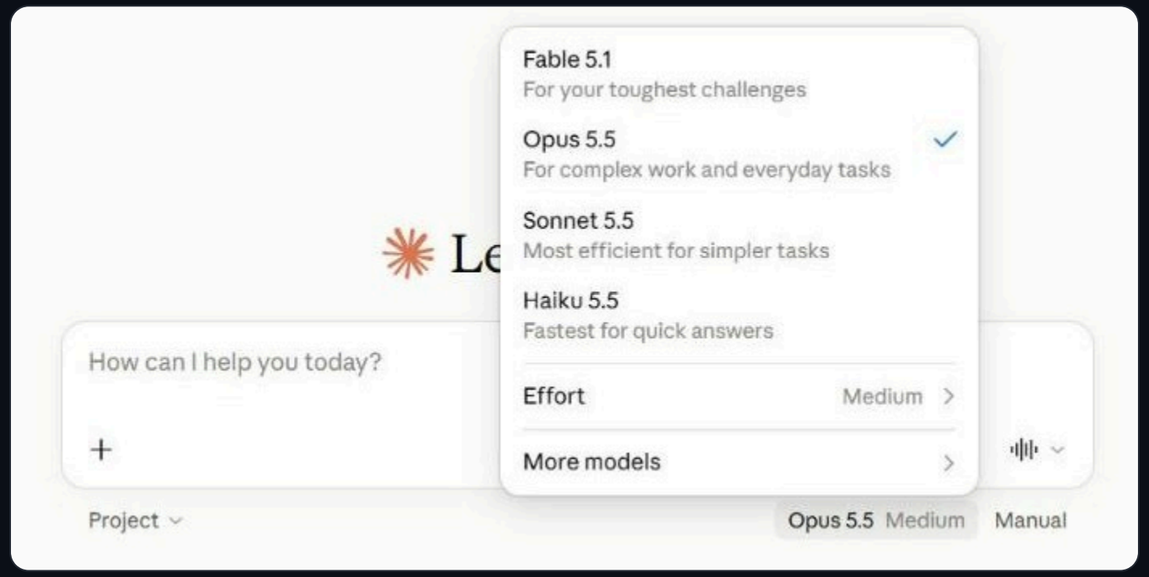

Screenshot: claude.ai, 13 Oct 2026, the course author's account (chat history blurred)

1. New — a new chat
2. Projects — folders for topics
3. Artifacts — everything you made
4. Chat ↔ Code — two modes
5. Input box: a request or question
6. "+" — files, connectors, research
7. Model and effort

MODELS

# One menu — four models

Screenshot: claude.ai, 13 Oct 2026, the course author's account (chat history blurred)

| | |
|---|---|
| **Fable 5.1** | the hardest tasks; slower and pricier<br>«For your toughest challenges» |
| **Opus 5.5** | a good default<br>«For complex work and everyday tasks» |
| **Sonnet 5.5** | simpler tasks, saves your limit<br>«Most efficient for simpler tasks» |
| **Haiku 5.5** | quick short answers<br>«Fastest for quick answers» |

> Rule: **smarter → slower and uses your limit faster**. Effort — how long the model "thinks" before answering.

PLANS • OCTOBER 2026

# The free plan is enough for this lesson

## Free

$0

- ✓ chat on web, PC and phone
- ✓ artifacts: Docs, Slides, Design
- ✓ web search, memory
- ✓ up to 5 projects, connectors

## Pro

$20 / month

- ✓ everything in Free, a bigger limit
- ✓ Claude Code, Research
- ✓ Claude in Chrome and Office
- ✓ Dashboards, data in artifacts

## Max · Team · Enterprise

Max from $100 · Team from $20 a seat

- ✓ Max — 5–20× the limit
- ✓ Team — sharing inside the company
- ✓ admin controls, single sign-on
- ✓ data not used for training by default

> The limit is a 5-hour “tank”, shared by the web, the app and Code. Ran out — wait or move up a plan.

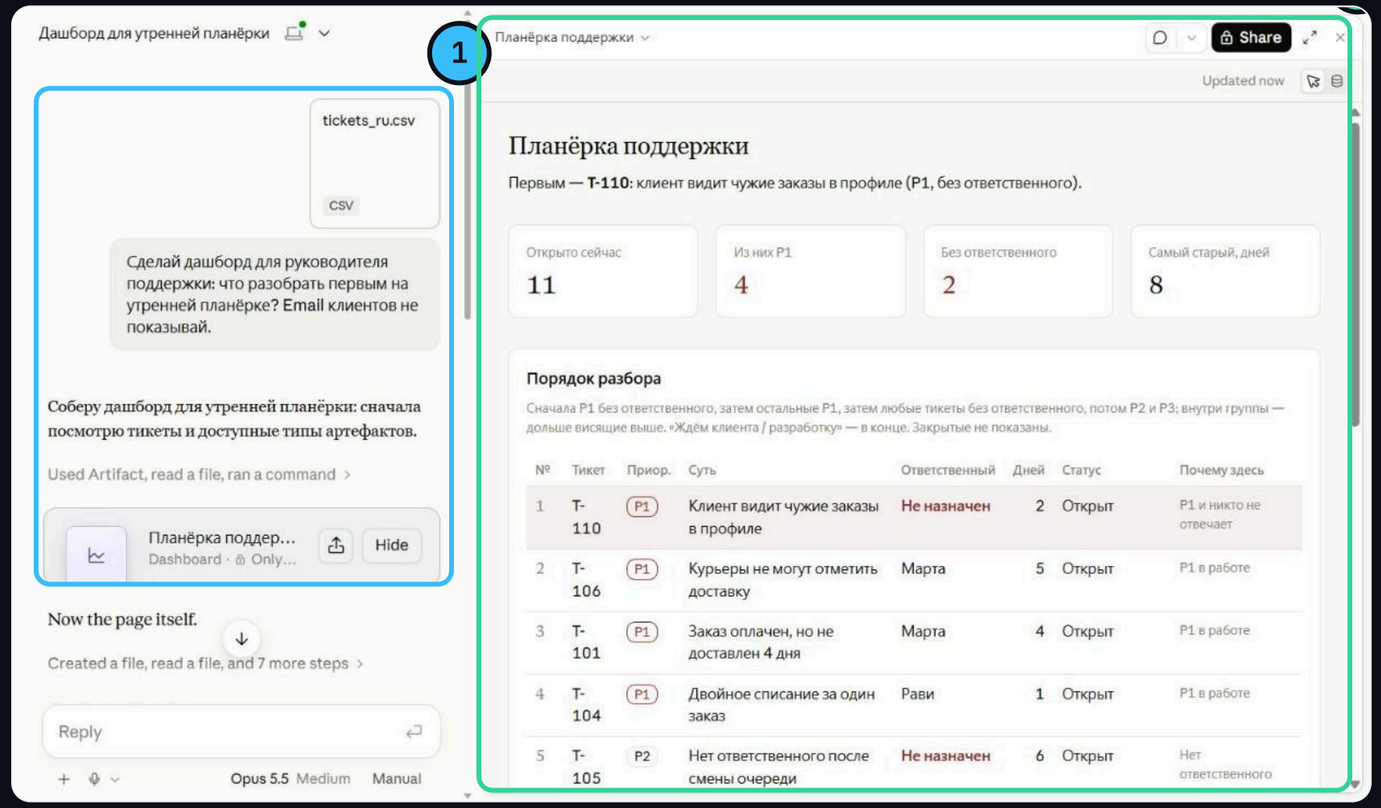

DEFINITION

# An artifact is something you would put in front of another person

CLAUDE MAKES AN ARTIFACT WHEN THE RESULT IS…

- ✓ **Substantial** — usually more than 15 lines
- ✓ **Self-contained** — makes sense without the chat
- ✓ **Worth editing** and improving
- ✓ **Useful later** — you will come back or show it

**A short answer** (“how many urgent?”) is just an answer, not an artifact.

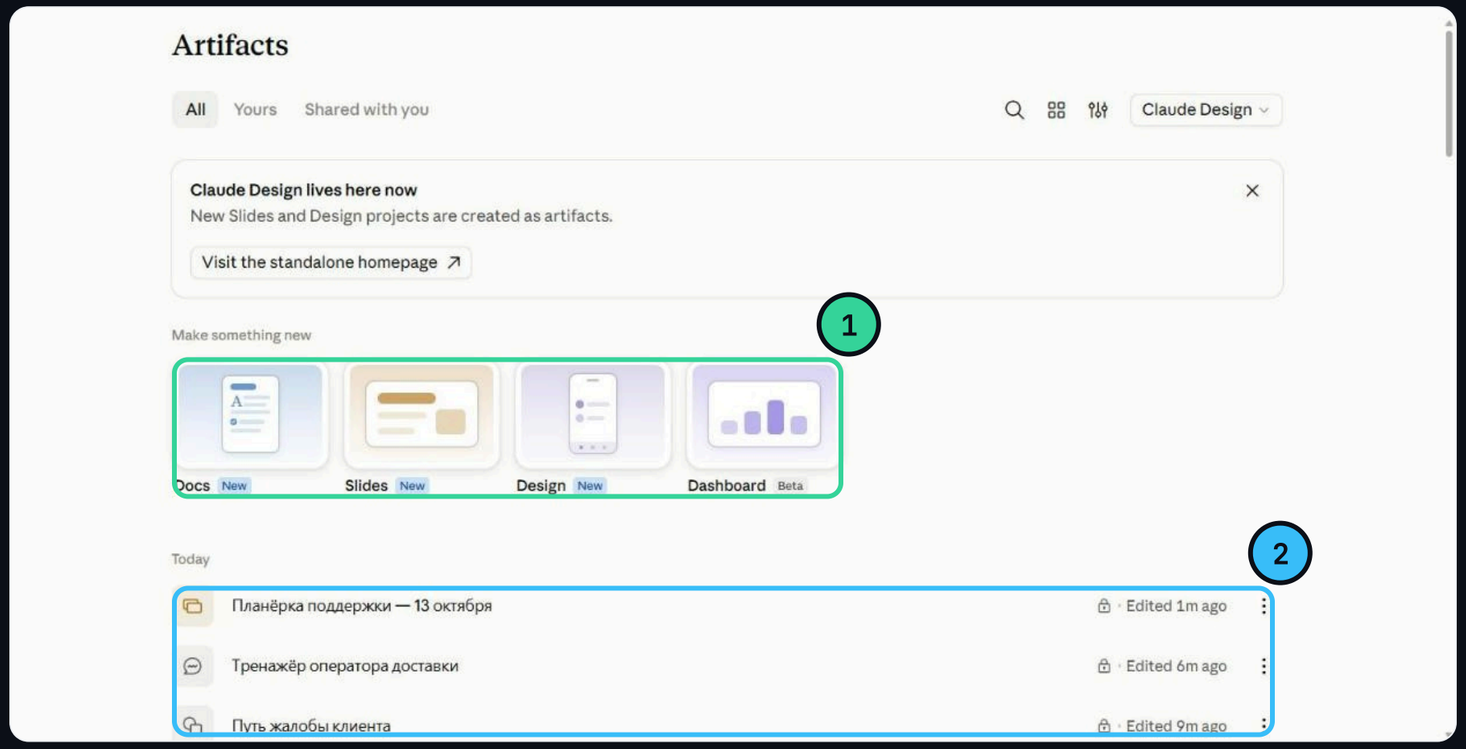

1 the file, the request and the artifact card in the chat  2 the artifact — in its own window on the right

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

THE ARTIFACTS TAB

# All your artifacts in one place

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

1. **Start from a template**
   Docs, Slides, Design, Dashboard (beta)

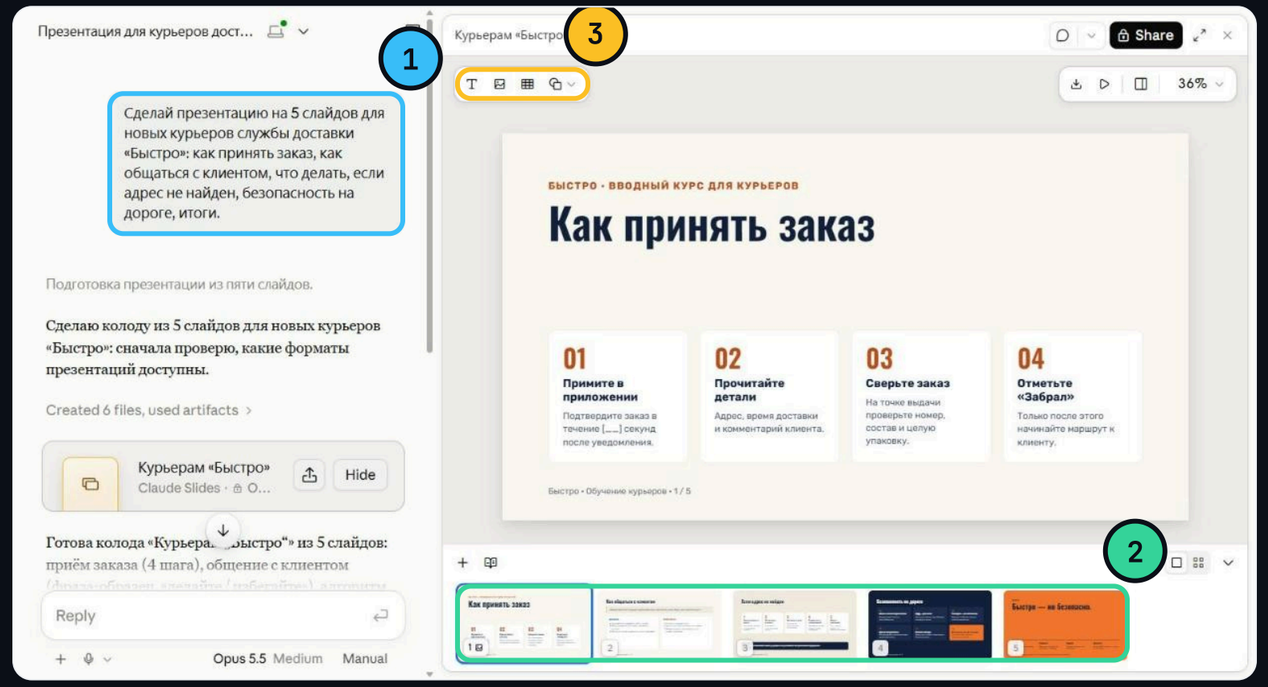

2. **Everything you made**
   from any chat, with dates

\+ **Or just ask in a chat**
   “make…” — Claude picks the type

Artifacts were updated on 16 Sep 2026; older ones keep working. Motion (MP4 animation) is Team/Enterprise only.

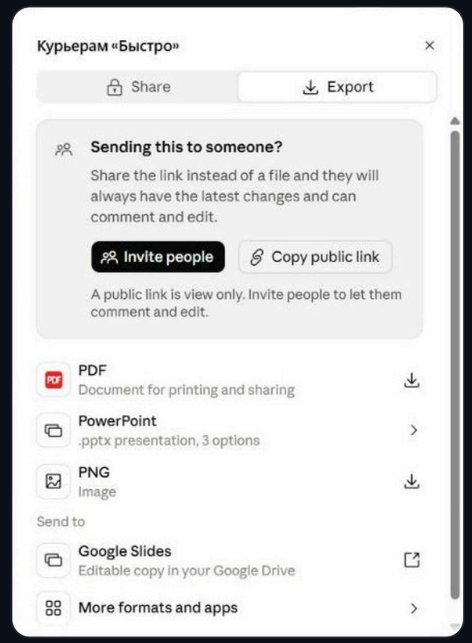

TYPE 1 • SLIDES

# A deck from one sentence

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

SHARE → EXPORT

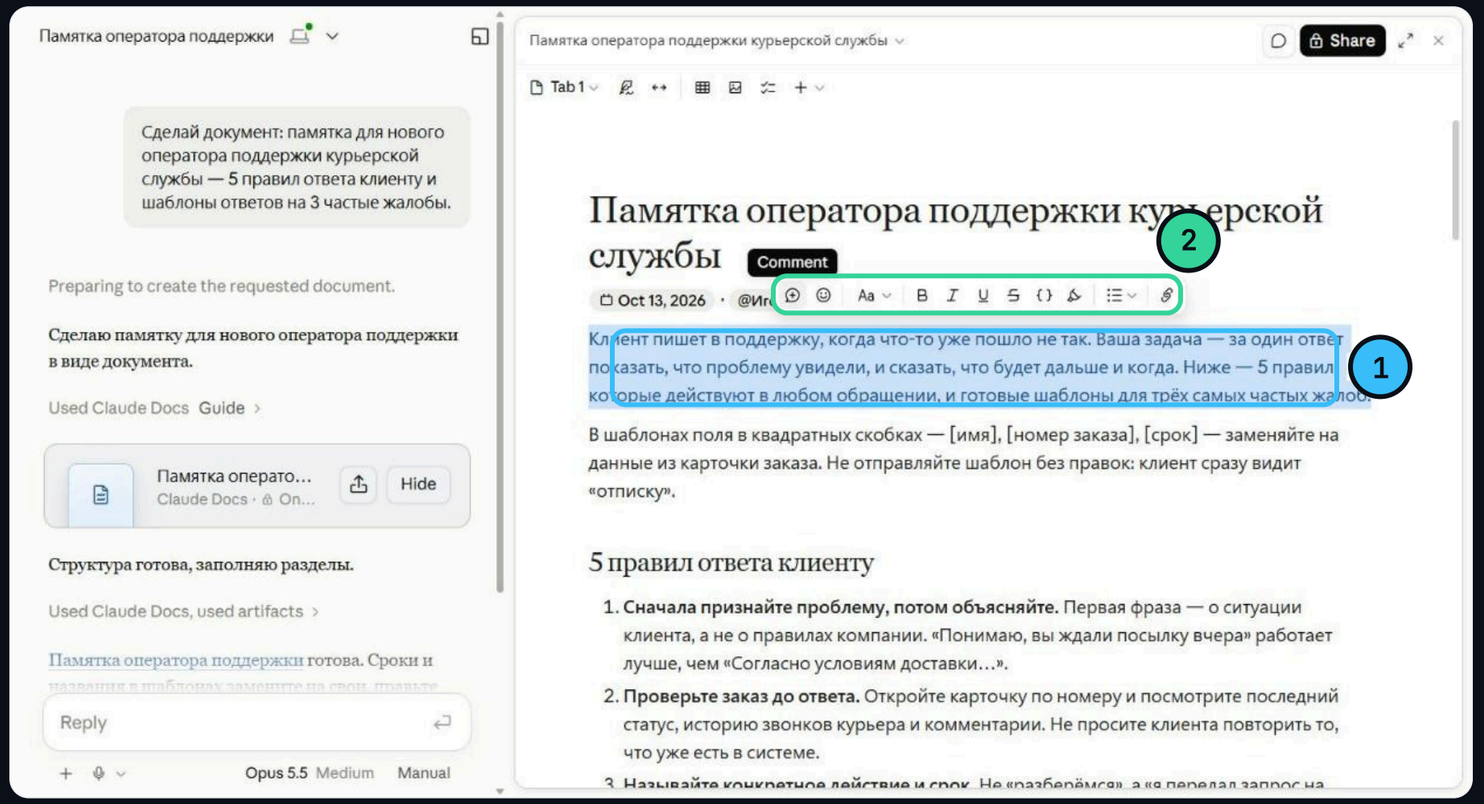

1. **One sentence in the chat**
2. **5 finished slides**
   edit right on the slide
3. **Text, images, tables**

> Download: **PowerPoint, PDF, PNG** or straight to **Google Slides**.

TYPE 2 • DOCS

# A document you write together with Claude

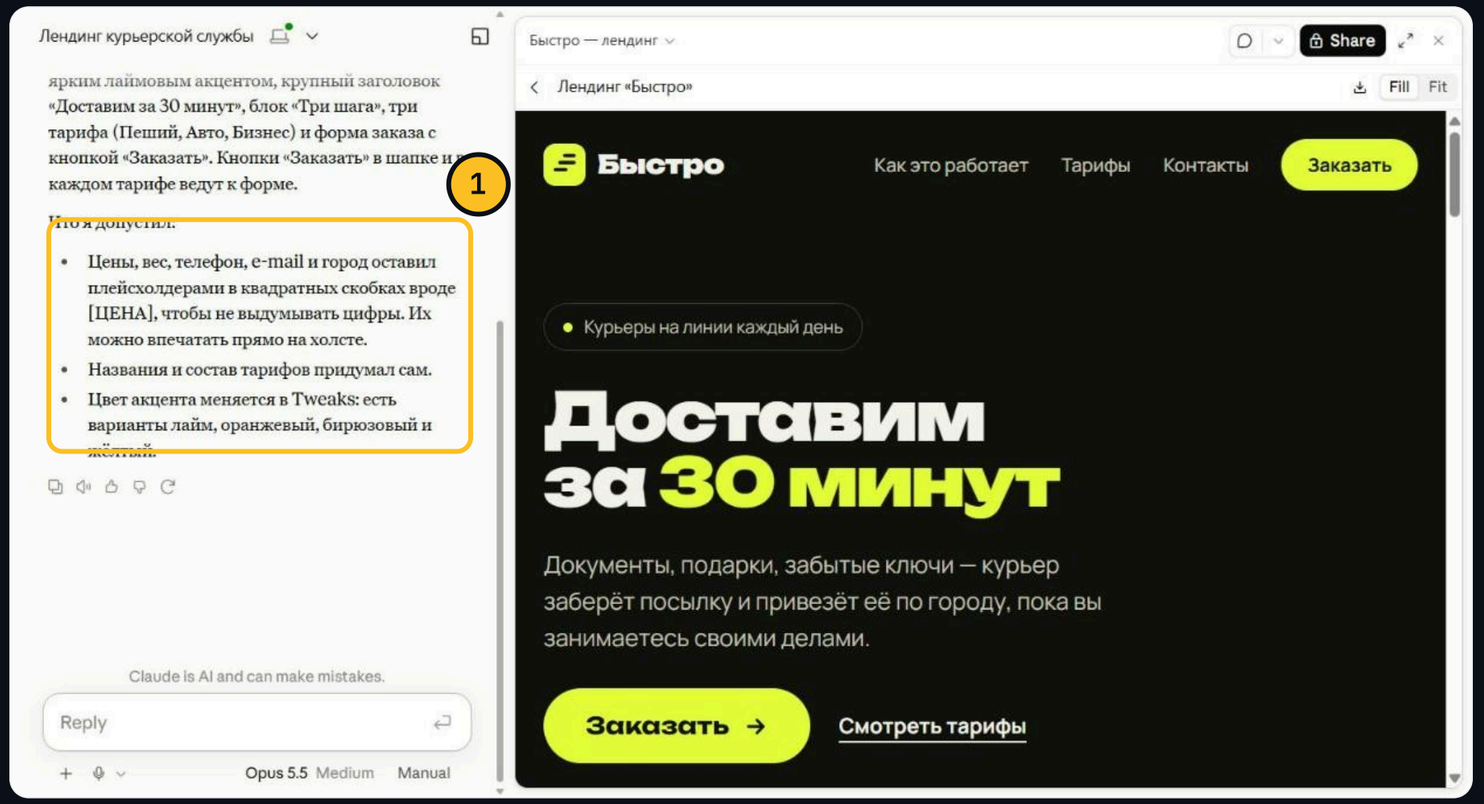

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

1. **Selected some text**
2. **Toolbar: format and comment**
   a comment can be addressed to Claude
3. **Export**
   Word · PDF · Markdown · Google Docs

> Edit it yourself like in Word, or ask Claude: “rewrite this paragraph more simply”.

TYPE 3 • DESIGN

# A website mockup — without a designer

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

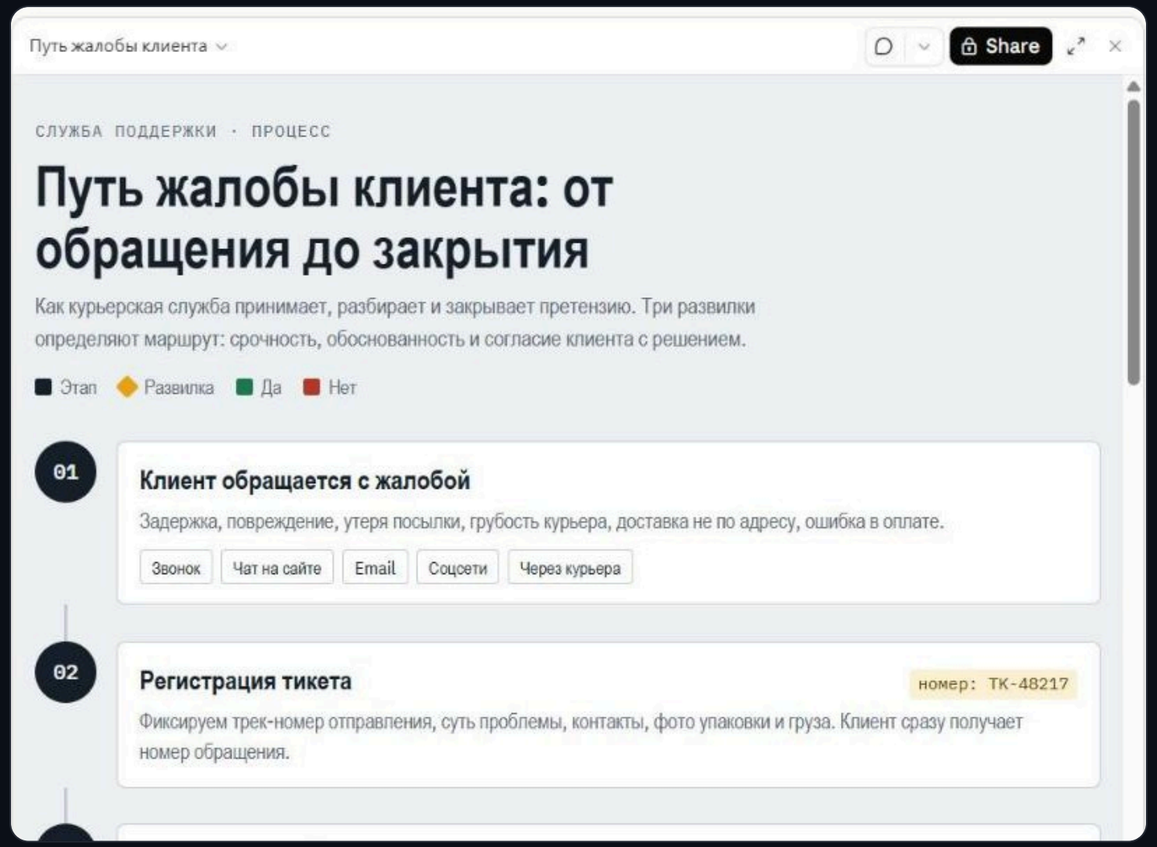

> “Make a design: a landing page for the «Bystro» courier service — delivery in 30 minutes, prices, an “Order” button.”

1 **Claude says honestly what it made up**
left prices and phones as [PRICE] — so as not to invent them

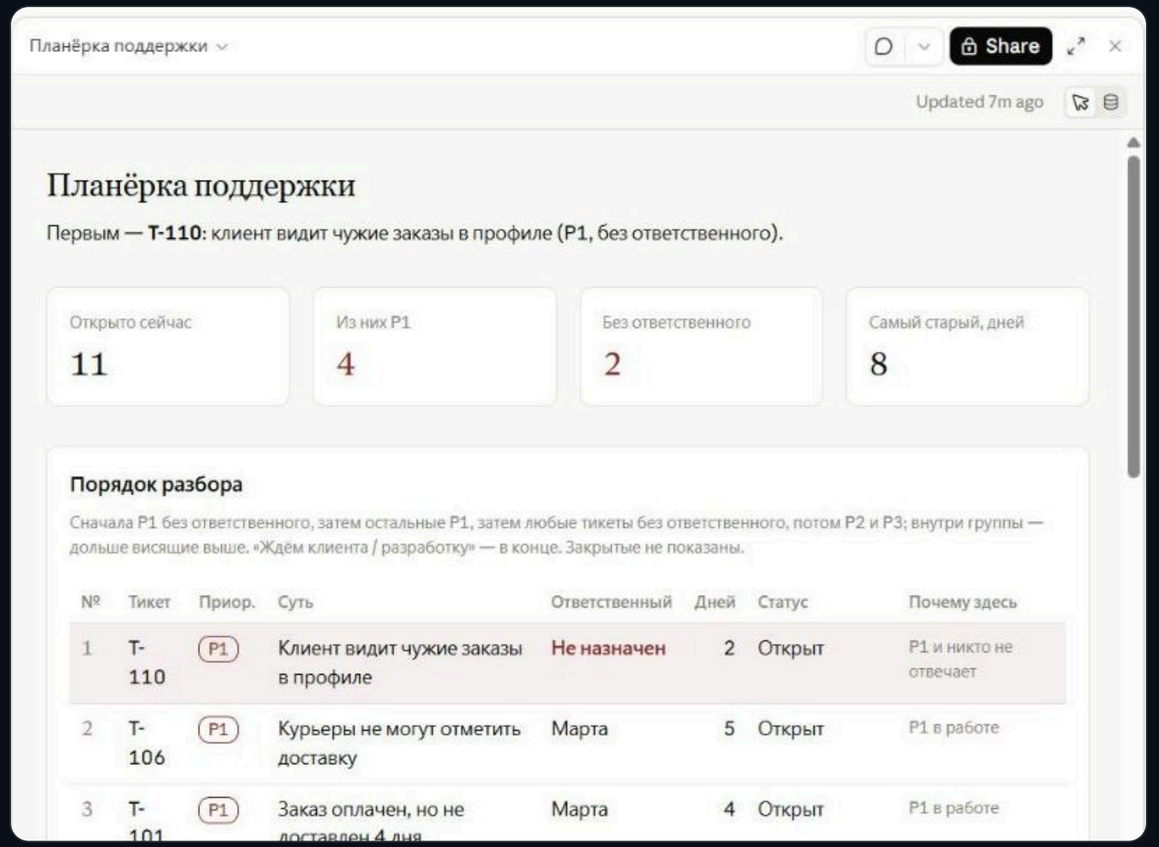

Export: HTML, PDF, PowerPoint, a .zip archive.

# Draw a process and show the data

DIAGRAM “Draw how a customer complaint is handled”

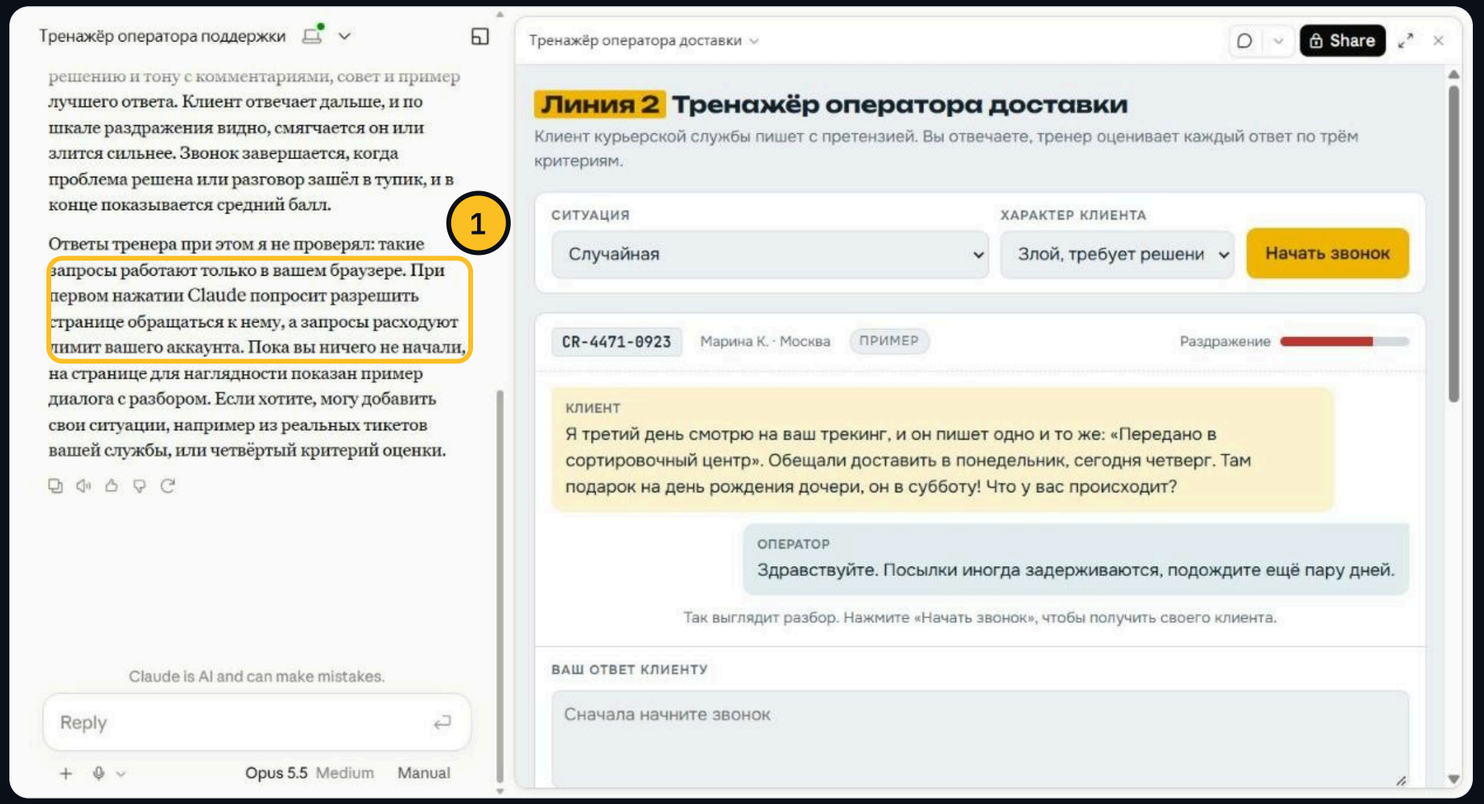

DASHBOARD “What first at stand-up?” + a CSV file

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

TYPE 6 • MINI APP

# An artifact with Claude working inside

Screenshot: claude.ai, 13 Oct 2026, the course author's account (chat history blurred)

> "Make a coach: Claude plays an angry customer, I answer, and Claude grades my answer on 3 criteria."

1 **Claude warns you**
asks for permission on first use; requests count against the user's limit

> Turned on in Settings → Capabilities → **AI-powered artifacts**.

BREAK

# 5 minutes

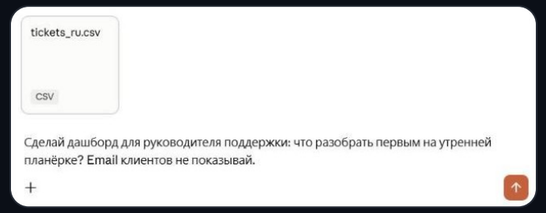

# 05:00

After the break: live demo, projects, connectors, safety.

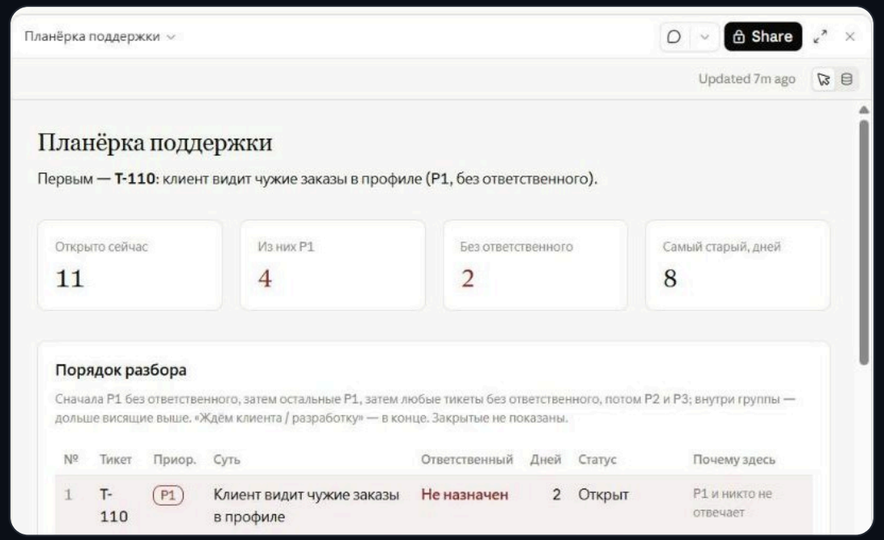

LIVE DEMO

# Table → dashboard → stand-up slides

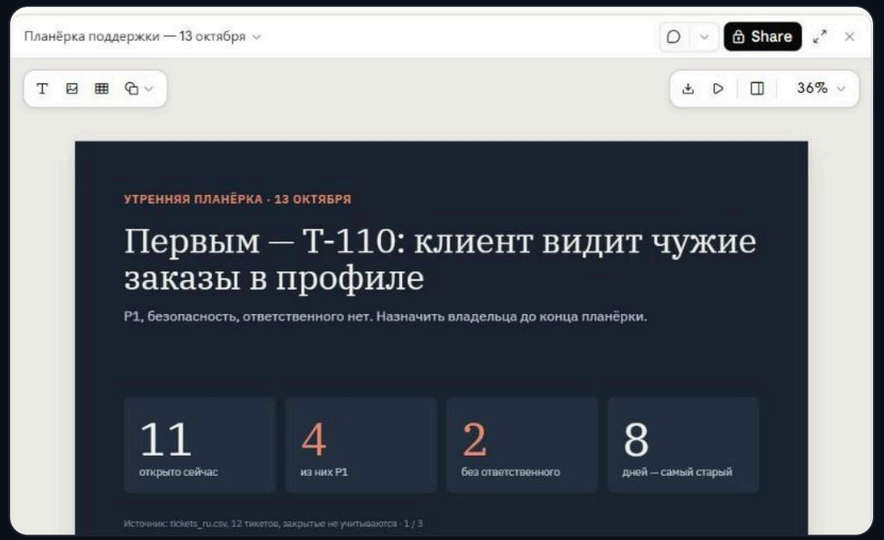

## 1 A file + one sentence

## 2 Dashboard

## 3 “Make 3 slides for stand-up”

BEFORE SHOWING IT — CHECK

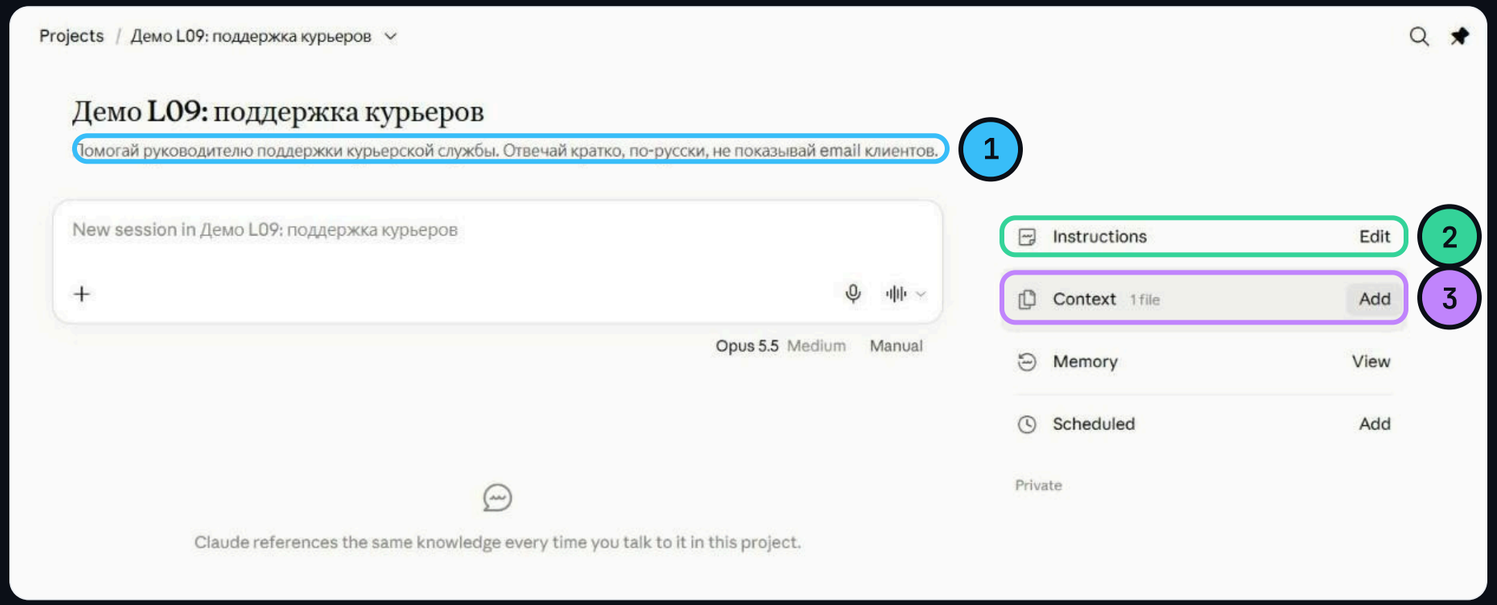

- ✓ Urgent on top? **T-110 first** — a customer sees other people’s orders
- ✓ Customer emails on screen? **No**
- ✓ Do the numbers match the file? **11 open, 4 urgent** — checked

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

**The first version is a draft.** If you don’t like it, be precise: “move urgent tickets without an owner to the top”, not “make it better”.

PROJECTS

# A project is a folder Claude remembers in every chat

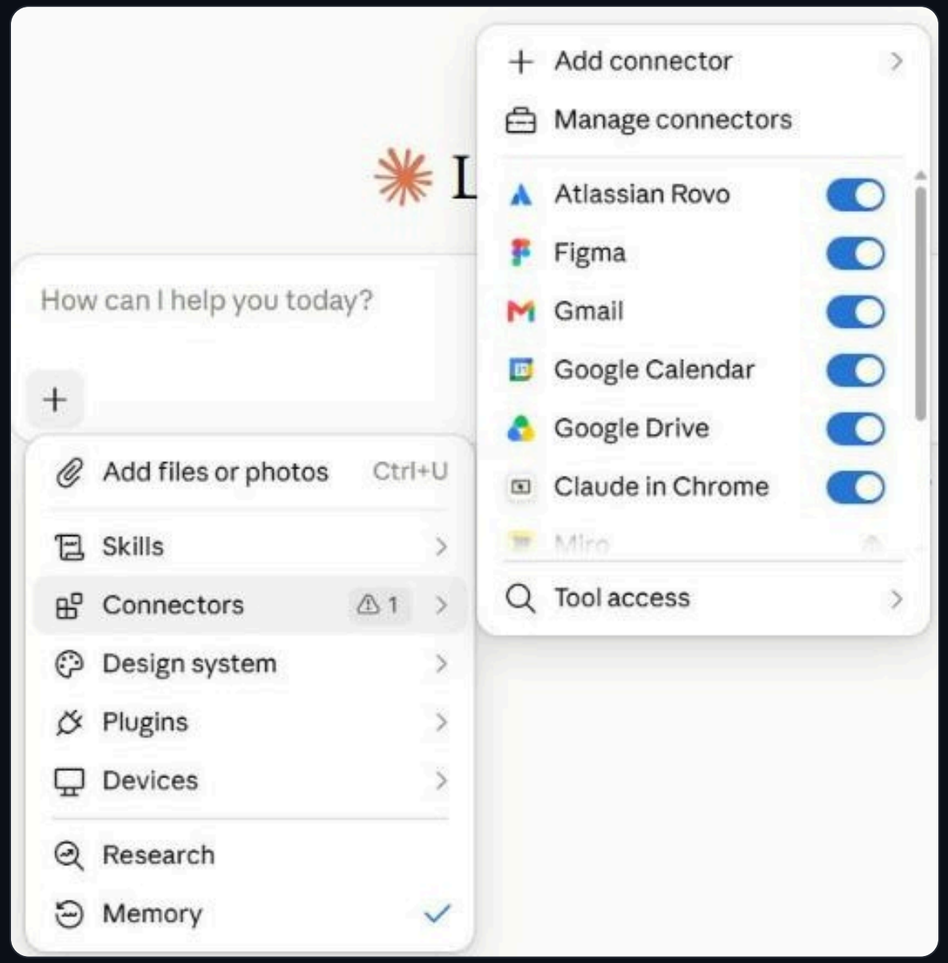

Screenshot: claude.ai, 13 Oct 2026, the course author's account (chat history blurred)

1. **Project description**
2. **Instructions**
   "answer briefly, never show emails"
3. **Project files**
   tickets.csv, guides, reports

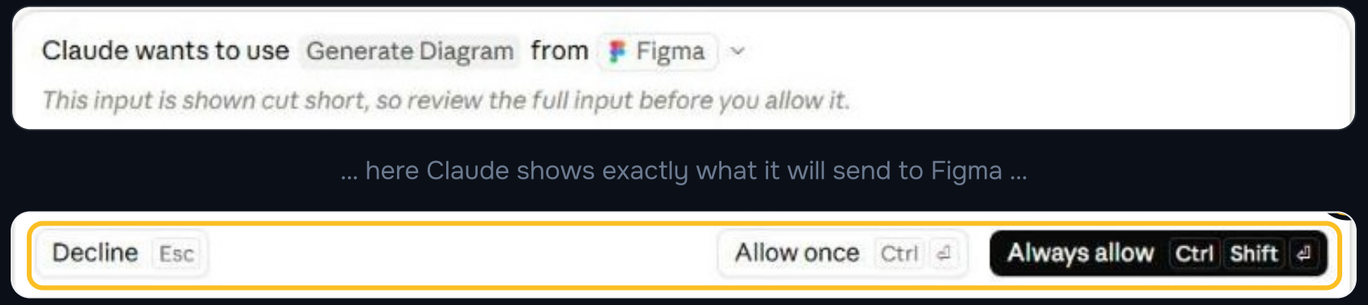

> No need to upload files and explain the rules every time. **Free — up to 5 projects.**

# Claude knows only what you gave it

"+" → CONNECTORS

BEFORE ACTING IN ANOTHER SERVICE — A QUESTION

1 **Decline · Allow once · Always allow**
you decide; "once" is the safe choice

Screenshot: claude.ai, 13 Oct 2026, the course author's account (chat history blurred)

NEXT STEP

# When Claude doesn’t just answer but acts

**IN THE CHAT** opened a browser itself and collects prices

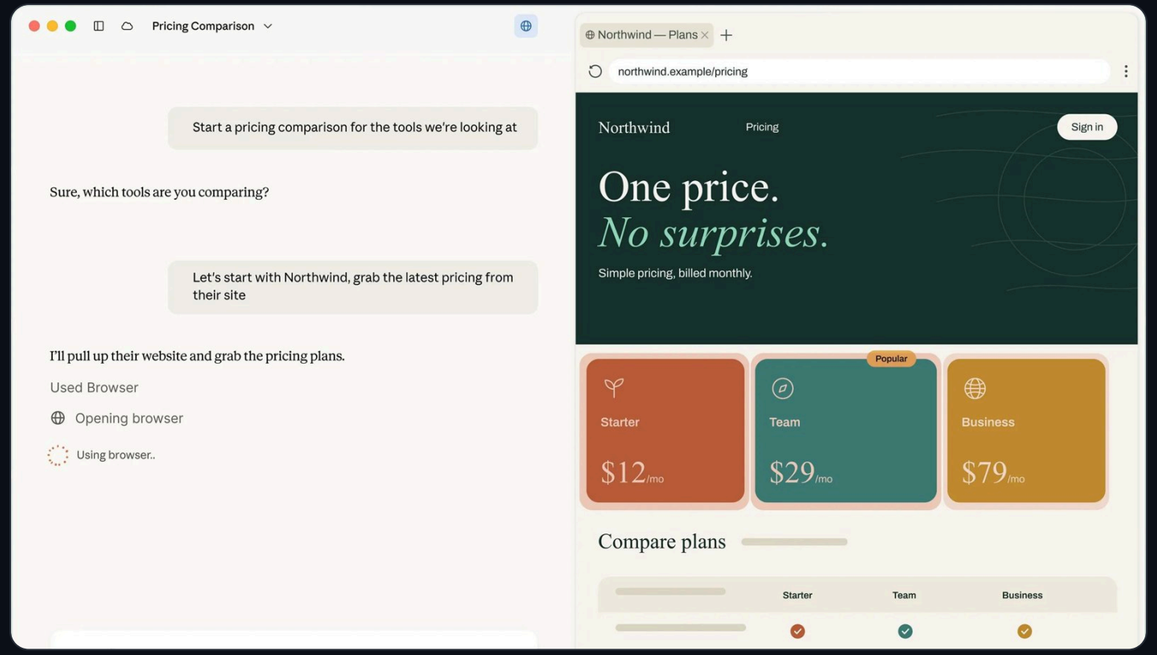

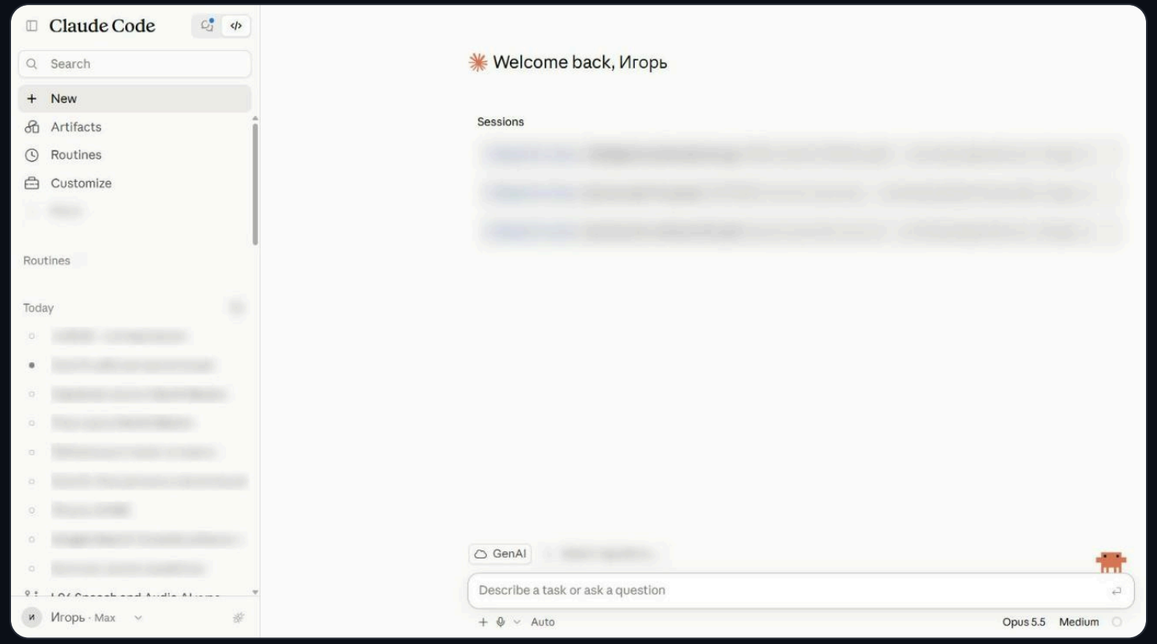

Image: Anthropic

**CODE** the programmers’ mode

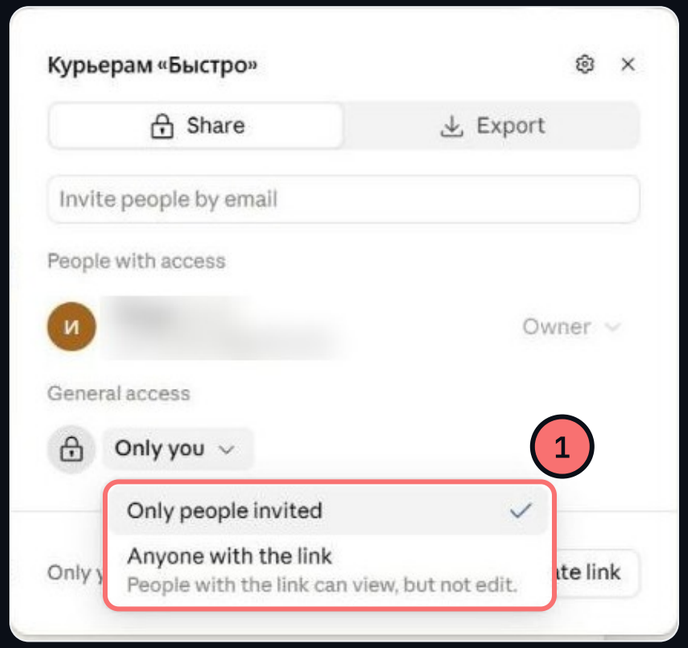

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

> These are **agents**: goal → steps → result. Details in L11 and L16. And **skills** are ready-made “recipes” Claude opens by itself (e.g. “make an Excel file”).

SAFETY

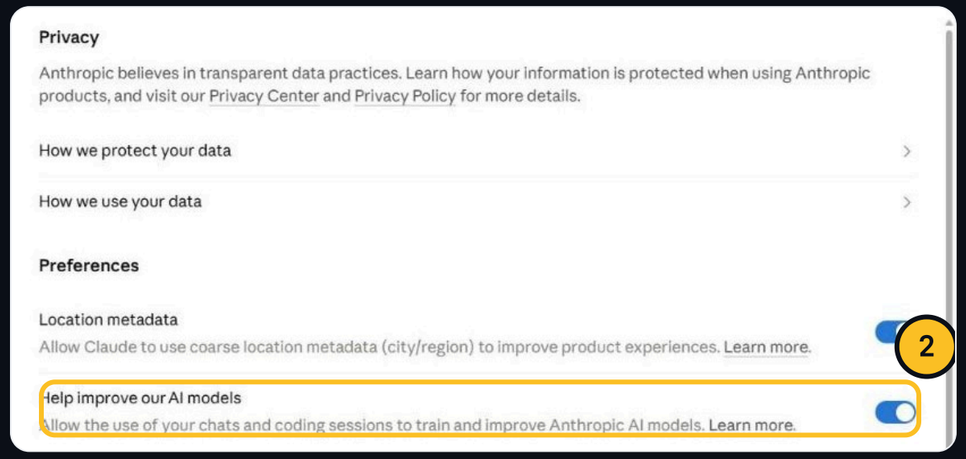

# A public link is a publication

SHARE

1 “Anyone with the link” — anyone who has it can see

SETTINGS → PRIVACY

2 “Help improve our AI models” — your chats are used for training. Your call.

NEVER PASTE INTO THE CHAT

- ✕ passwords, keys, card numbers
- ✕ personal data of customers and colleagues
- ✕ confidential company documents — without permission

> A new artifact is visible **only to you**. Share it once you’ve checked there’s no personal data inside.

Screenshot: claude.ai, 13 Oct 2026, the course author’s account (chat history blurred)

HOMEWORK • SUMMARY

# Make two things of different types

### 1. A deck or a document

on a work or study topic

### 2. A dashboard, diagram or coach

from your own **anonymised** data

Hand in: 2 prompts, 2 links or screenshots and **one fix** you asked for after checking.

FOUR RULES

1. **Chat to think, artifact to make a thing**
2. **Ask precisely: what, for whom, from which data**
3. **Check: numbers, made-up facts, personal data**
4. **Share deliberately: a link = a publication**

**Lesson 10:** open models on your own computer (LM Studio) and in the cloud.
