

ENGINEERING MASTERCLASS • 90 MINUTES

AI, ML & Generative AI

Engineering Mental Models, System Architecture & Production Realities

Separating algorithmic determinism from the probabilistic physics of foundation models. A rigorous engineering guide to architecting and deploying dependable AI systems in enterprise software.

"The foundation model is only 10% of a production system. The remaining 90% is contracts, validation, security, and infrastructure."

Core curriculum principle: strict boundaries between deterministic algorithms, classical ML, and Foundation Models.

Axiom: An engineer first classifies the problem class, then selects the appropriate tool.
