L09 — Workshop and Homework

Student artifact: Claude Artifact Build Brief

GenAI Basics · Module 09 · 2026-09-08

In-class exercise: 25 minutes

1. Choose one scenario: support triage, course feedback analysis, content calendar planner, or simple product discovery board.
2. Fill the Artifact Build Brief: user, decision, source data, output type, constraints and acceptance tests.
3. Generate or inspect an artifact using Claude, the instructor demo, or the offline fallback.
4. Run at least five acceptance tests. Mark pass/fail and write one targeted revision request.
5. Revise once and record what changed.

Artifact Build Brief template

Section	Student input
Problem / decision	What decision should the artifact help someone make?
Primary user	Who uses it and what do they already know?
Source data	Files, fields, assumptions, privacy warnings.
Artifact type	Dashboard, document, quiz, calculator, diagram, prototype, etc.
Must-have behavior	Filters, sections, calculations, validation, export, accessibility.
Constraints	Style, privacy, allowed libraries/tools, platform limitations.
Acceptance tests	At least five concrete checks.
Revision backlog	Three specific improvements after the first version.

Homework

Submit a single ZIP or folder containing the build brief, the initial prompt, the acceptance-test matrix, and the final artifact or a screenshot/link plus a short note describing what changed in revision.

Rubric

Criterion	Excellent	Needs work
Problem framing	The artifact supports a clear decision or workflow.	The artifact is decorative or vague.
Prompt quality	Contains inputs, constraints, output spec and tests.	Mostly asks Claude to “make something good.”
Inspection	Student finds at least one real issue or tradeoff.	Student accepts first output without testing.
Revision	Change request is specific and	Revision is taste-only or unclear.

	justified.	
Governance	Privacy and sharing risks are named.	Sensitive data/public link risks are ignored.
