L09 — QA Review Report

Critic findings, fixes applied and final quality gates

GenAI Basics · Module 09 · 2026-09-08

Review summary

Module 09 was reviewed as a practical, beginner-friendly lesson on Claude surfaces and Artifact workflows. The main risk identified in pass 1 was over-broad scope: Claude Code, Managed Agents, Skills and API could each become a separate lecture. The fix was to keep this module at ecosystem-and-workflow depth and reserve deep agentic development for later modules.

Critic pass 1 findings and fixes

Reviewer	Finding	Fix applied
Subject-matter expert	Avoid stale product claims about exact model names, limits and prices.	Moved volatile facts to Source Notes; slides use stable concepts and caveats.
Practical engineer	API section must state that applications own state, permissions and side effects.	Added tool-use loop and governance language to lecture, script and slide 12.
Pedagogy reviewer	Too many Claude surfaces could confuse beginners.	Added decision matrix and kept depth proportional to module level.
Beginner-student reviewer	“Artifact” may sound like an abstract AI term.	Added self-contained output definition and concrete examples.
Voice-of-Tone editor	Initial draft had vendor-demo enthusiasm.	Rewrote in direct instructor voice; removed hype claims.
AI-ishness detector	Detected symmetrical generic phrases like “unlock productivity.”	Replaced with task-oriented language and testable criteria.
Logic/timing audit	Demo plus developer topics could exceed 120 minutes.	Added 90-minute compression path and time boxes.
Practice-value audit	Practice needed a durable student output.	Student artifact is now an Artifact Build Brief plus acceptance matrix.
Visual auditor	Deck needed fewer generic cards and more flows/matrices.	Rebuilt slides around ecosystem map, workflow loop, decision flow and governance matrix.

Second independent audit

- Learning arc is coherent: ecosystem → artifact workflow → demo → developer layer → governance → practice.
- 90–120 minute timing is realistic with the provided compression path.
- Practice produces a useful reusable artifact that can feed later course modules.

- Slides contain topic-appropriate Anthropic-like warm/coral visual language without depending on vendor logos.
- Source notes isolate volatile facts and prioritize official Anthropic/Claude docs.
- No student-facing text includes internal QA labels, prompt-engineering meta chatter or synthetic filler.

Quality Gates

Gate	Verdict	Evidence
Source / Freshness	PASS	Reviewed in final package; no unresolved blocker.
Subject Accuracy	PASS	Reviewed in final package; no unresolved blocker.
Logic / Sequence	PASS	Reviewed in final package; no unresolved blocker.
Beginner Clarity	PASS	Reviewed in final package; no unresolved blocker.
Voice & Tone	PASS	Reviewed in final package; no unresolved blocker.
AI-ishness Removed	PASS	Reviewed in final package; no unresolved blocker.
Timing Fit	PASS	Reviewed in final package; no unresolved blocker.
Practice	PASS	Reviewed in final package; no unresolved blocker.
Live Demo	PASS	Reviewed in final package; no unresolved blocker.
Homework / Student Artifact	PASS	Reviewed in final package; no unresolved blocker.
Artifact Completeness	PASS	Reviewed in final package; no unresolved blocker.
Slide Content	PASS	Reviewed in final package; no unresolved blocker.
Slide Visual QA	PASS	Reviewed in final package; no unresolved blocker.
Diagram Quality	PASS	Reviewed in final package; no unresolved blocker.
Image Relevance	PASS	Reviewed in final package; no unresolved blocker.
Critic Pass 1	PASS	Reviewed in final package; no unresolved blocker.
Audit Pass 2	PASS	Reviewed in final package; no unresolved blocker.
Overall	PASS	Reviewed in final package; no unresolved blocker.

Residual risks

- Claude product packaging may change quickly. Refresh sources before live delivery.
- Instructor should avoid showing personal Claude chats or connected files during demo.
- If live Claude access is unavailable, use the local HTML fallback and keep the learning objective unchanged.

Render and smoke-test evidence

- Slide deck rendered successfully to 22 PNG pages. Slide montage was visually inspected; no crooked text, overlaps, out-of-bounds elements or unreadable text were observed.
- PptxGenJS overlap and bounds checks were executed in deck generation. Final warning log is empty.
- All DOCX artifacts were rendered to page images; a document montage was visually inspected for blank pages, table overflow and unreadable layout.
- Demo smoke test passed: api_tool_loop_mock.py prints the expected tool_use/tool_result/final-response sequence; artifact_prototype.html contains the required stale P1 and missing-owner checks.
